

SAP Project Management

We take on technical project management and employ experienced project managers to realise your SAP infrastructure project. Deadlines, resources, quality and costs are always guaranteed thanks to careful checks.

The project management services can be used selectively or in a targeted manner for specific topics, subprojects or entire projects and may be requested either in the context of a project order, a workshop or coaching.

Based on the international project management standards and SAP procedure models and tools, the startup or updating of SAP infrastructure is supported and implemented.

We provide trained and certified project managers to manage small to large projects.

- Project Management (IT project management) according to recognised standards
- Planning and managing SAP infrastructure projects
- Development, checking, and support (PoC) with SAP technology concepts
- SAP IT architecture and design
- Support with hardware evaluation (server, memory, operating system and database)
- Developing high availability concepts for the SAP platform (virtualisation, clustering, high availability and stand-by database)
- Working out SAP backup and restore concepts
- Developing disaster recovery concepts
- Planning and performing SAP upgrades, unicode conversions and platform migrations
- Developing SAP system and operating concepts
- Coming up with test concepts
