

# Mission Migration 2025

Start in time to migrate to  
SAP S/4HANA®!

## SAP S/4HANA® Migration 2025

SAP® has underlined its commitment to innovation by continuing to deliver new features to the previous SAP® solutions in form of enhancement packages and by prolonging mainstream maintenance for SAP® Business Suite 7 core applications until 2025. However, to harness the full innovation potential of SAP® and benefit from the new technologies that enable an intelligent ERP, a migration to S/4HANA® is inevitable.

Keep up with the innovation of SAP® and start your S/4HANA® migration in time.

In this context you need to:

- ✘ migrate your SAP® landscape to HANA
- ✘ learn how to work with Linux
- ✘ adapt the business processes that are affected by the migration
- ✘ take advantage of SAP HANA® as a platform and to prepare yourself for your journey to SAP S/4HANA®

---

### Joined forces for a smooth transition to SAP S/4HANA®

Together, we offer a complete solution for the migration to SAP® ERP to SAP S/4HANA® running on Microsoft Azure, including managed services, licensing and cloud consumption.

# Services before, during, and after the migration to SAP S/4HANA®

## Pre-Migration

### SOLHANA Assessment

With SOLHANA you receive a unique assessment, qualifying the status of your current SAP® landscape. SOLHANA understands your infrastructure and requirements and determines your unique conversion path to SAP S/4HANA®.

### SAP Maturity Assessment

The assessment is ideally designed for customers who have a need or aspiration to optimize their asset-based Software lifecycle framework by establishing the baseline and defining the integrated roadmap against the industry Best Practices and SoftwareONE's unique FAMP-Index.

## Migration

### SOLHANA Migration

SOLHANA's approach and deep business domain expertise in both SAP® and Linux facilitates a structured framework for your business to move to the next generation of SAP® ERP Suite. Our dedicated team of consultants will accelerate your journey to S/4HANA®.

As every organization's migration path is unique, this process is tailored for each organization. SOLHANA recognizes that priorities vary and each organization needs to determine the right timetable for its specific requirements.

## Post-Migration

### SOLHANA Operation

SOLHANA's deep business domain expertise and experience in both SAP® and Linux guarantee the smooth operation of your SAP S/4HANA® landscape. The SOLHANA experts provide SAP® technology and application managed services on 24 x 7 x 365 basis to support and maintain your SAP S/4HANA® environments, delivering high quality services with maximum flexibility, efficiency and scalability of operations.

Within the framework of our Service Level Agreements (SLA), SOLHANA offers comprehensive support and monitoring services, tailored to your individual requirements and wishes. SOLHANA provides fast, professional and reliable support in line with your requirements so you can fully concentrate on your core business.

### PyraCloud-P

SoftwareONE's PyraCloud Platform enables organizations to implement a comprehensive software and cloud portfolio management process, reducing the overall spend and maximizing the value of their software investments. It analyzes vast amounts of data to help make the best decisions for on-premises and cloud software spend.

### Software Asset Management

The SAM Managed Service (SMS) is based on a SAM tool, which is individually tailored to the specific customer situation and which we provide to you as a hosted variant in service. With this tool both the technical inventory data (license requirements) and all relevant contract data (license rights) are being kept up-to-date.
