

Infrastructure as a Service (IaaS)

ITPC's Infrastructure as a Service (IaaS) model supports and maintains our customer's cloud infrastructure, so they can focus on managing their business applications. Choose among the best hyperscale public cloud providers – Amazon Web Services (AWS), Google Cloud and Microsoft Azure – and obtain a flexible infrastructure to host your business-critical applications.

Exploit the benefits of the public cloud of your choice by cutting capital expenses of owning and maintaining an on-premise infrastructure. With the pay-per-consumption model of the cloud, you only pay for the servers, storage and networking resources your business applications requires. As a reseller of the public cloud, we can handle the billing of the cloud resources, acting as a liaison between you and your preferred cloud provider.

With ITPC's Infrastructure as a Service (IaaS) model, you gain a scalable environment that remains compliant with the ever-changing governance and security standards. ITPC manages and supports your cloud environment, handling all the infrastructure-related tasks.

Features

- Service desk
- System monitoring (CPU, memory, disk, services)
- Incident, change and escalation management
- Incident handling for OS
- Backup & recovery services
- Installation of OS patches
